# UNIMAC SPECIAL PROJECTS DIVISION

Since 1979, Saudi-based UNIMAC, has been a market-leading infrastructure company specializing in asphaltting.

Early on in its development, UNIMAC leveraged a competitive advantage in the Saudi Arabian market by developing a division that worked at speed, with quality and with excellent service. UNIMAC realized early on this need for speed and agility when dealing with tight deadlines and urgent projects: the fruition of this conceptual corporate change is now at hand.

From this stemmed UNIMAC Special Projects Division – an arm of UNIMAC that is given the flexibility and autonomy on site. Supported by state-of-the-art equipment, asphalt plants, and the capital of the mother company, SPD can execute mega projects in schedules that no other infrastructure company could do. All departments are headed by experts in their respective fields, and culture of striving for excellence is felt throughout the business.

This ideology is what allowed UNIMAC SPD to successfully execute the following milestones:

- **First Formula E racetrack in 3 months**
- **Second Formula E racetrack in 45 days**
- **Formula 1 SAGP Jeddah Corniche Circuit in 7 months**

Our celebration doesn't lie in the speed of execution alone – the celebration lies in the global standards that SPD and UNIMAC have been able to achieve and surpass. It lies in the ability to meet F1 standards with a track that was built with local materials, by a local company.

UNIMAC SPD is phenomenally proud of its successes throughout the years and believes the opportunities that lie ahead are limitless.

UNIMAC Special Projects Division focuses on motorsports. You will find the list of projects in the Project Portfolio Section.

**WHEN WORKING  
WITH UNIMAC,  
YOU'RE WORKING  
WITH A PARTNER.**

**UNITED MAINTENANCE AND CONTRACTING COMPANY**  
BUILDING HIGHWAYS AND AIRPORTS SINCE 1979
